

This listing of claims replaces all prior versions, and listings, of claims in the present application.

Listing of Claims:

- A1
- 5413
31
1. (Currently amended): A telecommunication device comprising:
 - a receiving module receiving a telephone call; and
 - a processor identifying a dialed telephone number associated with the call, said processor using the dialed telephone number to retrieve a first telephone number, a second telephone number and at least one user preference from a storage medium, said processor using the at least one retrieved user preference to route the call to at least two ~~one~~ destination telephone numbers substantially simultaneously, wherein the at least two ~~one~~ destination telephone numbers are ~~is~~ selected from the group including the retrieved first and second telephone numbers and a voice mailbox telephone number.
 2. (Currently amended): The device of claim 1, wherein ~~said processor routes the call to two destination telephone numbers substantially simultaneously~~, a first of the at least two destination telephone numbers corresponds to the retrieved first telephone number and a second of the at least two destination telephone numbers corresponds to the retrieved second telephone number.
 3. (Currently amended): The device of claim 2, wherein said processor routes the call to a third of the at least two destination numbers corresponding to said voice mailbox telephone number after a predetermined time as defined by the at least one retrieved user preference.

A 4. (Original): The device of claim 3, wherein said predetermined time corresponds to a number of telephone rings defined by the at least one retrieved user preference.

Claims 5-8 (Canceled)

54B
31 9. (Original): The device of claim 1, wherein said processor prompts a caller of the telephone call with a menu of call destination options and said processor places the call to at least one destination telephone number in accordance with an option selected by the caller.

10. (Original): The device of claim 1, wherein said processor receives the call from a private branch exchange, and wherein the at least one destination telephone number is associated with the private branch exchange.

11. (Original): The device of claim 10, wherein the call is routed to a destination telephone number associated with a cellular telephone.

12. (Original): The device of claim 11, wherein the cellular telephone can operate independently from the telecommunication device.

13. (Original): The device of claim 10, wherein the call is routed to a destination telephone number associated with a pager.

14. (Original): The device of claim 10, wherein the call is routed to a destination telephone number associated with a personal digital assistant.

A) 15. (Original): The device of claim 1, wherein said processor receives the call from a public switched telephone network, and wherein the at least one destination telephone number is associated with a private branch exchange connected to the telecommunication device.

16. (Original): The device of claim 15, wherein said processor routes the call to a plurality of additional destination telephone numbers, wherein at least one additional destination telephone number is associated with a cellular telephone.

SLB
BI 17. (Original): The device of claim 1, wherein said processor is connected to a local area network and the at least one user preference is input via the local area network.

18. (Original): The device of claim 1, wherein said processor is connected to the Internet and the at least one user preference is input via the Internet.

Claims 19-27 (Canceled)

28. (Currently amended): A method of providing telecommunications to a user of an communication network, the method comprising the steps of:

connecting the communication network to a connect unit;

providing a first communication device at an extension of the communication network associated with the user;

providing a second communication device to the user;

routing a communication made to the extension to the connect unit;

identifying the extension from the routed communication;

using the identified extension to retrieve a first communication device number associated with the first communication device, a second communication device number associated with the second communication device, and at least one user preference; and

routing the communication in accordance with the user preference to at least ~~one~~ two destination communication numbers substantially simultaneously, wherein the at least ~~one~~ two destination communication numbers are ~~is~~ selected from a group including the first and second communication device numbers and a voice mailbox number.

Claim 29 (Canceled)

30. (Currently amended): A method of providing telecommunications to a user of ~~an~~ a communication network, the method comprising the steps of:

receiving a communication;

identifying a communication device number associated with the communication;

retrieving, based on the identified communication device number, a first communication device number, a second communication device number and at least one user preference;

routing, using the retrieved at least one ~~retrieved~~ user preference, the communication to at least ~~one~~ two destination communication numbers substantially simultaneously, wherein the at least ~~one~~ two destination communication numbers are ~~is~~

selected from the group including the retrieved first and second communication numbers and a voice mailbox number.

31. (Currently amended): The method of claim 30, wherein ~~the communication is routed to two destination communication numbers substantially simultaneously,~~ a of the at least two first destination communication numbers corresponds to the retrieved first communication number and a second of the at least two destination communication numbers corresponds to the retrieved second communication number.

32. (Currently amended): The method of claim 31, wherein the communication is routed to a third of the at least two destination communication numbers corresponding to the voice mailbox number after a predetermined time, as defined by the at least one retrieved user preference.

Claims 33-35 (Canceled)

36. (Original): The method of claim 30, wherein the communication is routed to a destination communication number associated with a cellular telephone.

37. (Original): The method of claim 30, wherein the communication is routed to a destination communication number associated with a pager.

38. (Original): The method of claim 30, wherein the communication is routed to a destination communication number associated with a personal digital assistant.

39. (Currently amended): An article of manufacture comprising a machine-readable storage medium having stored therein indicia of a plurality of machine-executable control program steps, the control program comprising the steps of:

receiving a communication;

identifying a communication device number associated with the communication;

retrieving, based on the identified communication device number, a first communication device number and a second communication device number;

routing the communication to at least ~~one~~ two destination communication numbers, wherein the at least ~~one~~ two destination communication numbers are ~~is~~ selected from the group including the retrieved first and second communication numbers and a voice mailbox number and wherein the control program routes the communication to the at least two destination communication numbers substantially simultaneously.

40. (Currently amended): The article of manufacture of claim 39, wherein ~~the control program routes the communication to two destination communication numbers substantially simultaneously,~~ a first of the at least two destination communication numbers corresponds to the retrieved first communication number and a of the at least two second destination communication numbers corresponds to the retrieved second communication number.

41. (Currently amended): The article of manufacture of claim 40, wherein the control program routes the communication to a of the at least two third destination

communication numbers corresponding to the voice mailbox number after a predetermined time.

42. (Canceled)

43. (Original): The article of manufacture of claim 39, wherein the control program routes the communication to a destination communication number associated with a cellular telephone.

Claims 44-51 (Canceled)
